

THE COLLEGE OF
OSTEOPATHS

The College of Osteopaths Foundation Course

The Foundation Course is an intensive course of study delivered by the College of Osteopaths. The course consists of 6 taught sessions that take place over two weekends, usually during the summer. Completion of this short course allows progression to the College's BOST/MOST programme.

Who is the course aimed at?

Anyone can attend the Foundation Course as it is designed primarily to be interactive, thought-provoking and enjoyable, as well as introducing essential skills and knowledge. However, the course may be recommended to you at interview, or attendance and successful completion, may be a condition of gaining access to the degree programme. Some people who may fall into these categories include:

- Those who have not studied science-based subjects beyond compulsory participation at school, but have the appropriate study skills
- Those who would benefit from a science refresher course prior to starting the degree
- Those who have been interviewed, and successful completion of the course is a condition to starting the degree
- Those who have not studied at H.E. Level and would benefit from practising the study skills essential for success, through relevant subject and topic based activities.

Course aims and objectives

- introduce you to the skills required to study at H.E. level and within an H.E. environment
- provide you with a broad understanding of the structure (anatomy) and functioning (physiology) of the human body so that you are able to cope with the in depth study of these subjects on the course
- provide you with an appropriate understanding of the underpinning physical, chemical and biological sciences
- provide you with the opportunity to explore relevant scientific ideas

Where does the course take place?

The course location will be at the Hendon Campus, Middlesex University and/or the College's teaching clinic at Borehamwood, or at Staffordshire University, Leek Road Campus.

Cost: £250 payable in advance.

Dates are available on the College of Osteopaths website www.collegeofosteopaths.ac.uk
